

Employability of our graduates

Noor Hussain, M.Phil.
Department of English, B. N. College, Dhubri

“You will escape from school only to discover that the world is bigger school and that you are back again in the first form”. This statement of G.B. Shaw made in the early 20th century is applicable to the overall education scenario in India, specially in Assam in the early 21st century. The kind of general education imparted by the Indian colleges is traditional and does not take note of the real-life situation. Present day society is a knowledge based society where knowledge sells like any other commodity. So our institutions should produce graduates who have functional knowledge of the subjects they graduate. The colleges in Assam are still offering mainly traditional courses. Only a few colleges in Assam offer technical or professional courses which should be the thrust of the educational institution in this era of globalization. Most of the graduates produced in our state find themselves misfit when they come out of their alma matter. As our former honourable President, Sri Pranab Mukherjee said, “ Higher education should be a bridge between our scientific knowledge and social needs” (*University News* Vol. 51, No.4).

Higher Education Empowerment Regulation Agency (HEERA): A New Step in Higher Education in India

Susmita Sen Gupta, Ph.D
Department of Chemistry, B. N. College, Dhubri

India is a nation of young people - out of a population of above 1.2 billion, 0.672 billion people are in the age-group of 15-64 years, which is usually treated as the ‘working age population’. It is predicted that India will see a sharp decline in the dependency ratio over the next 30 years, which will constitute a major demographic dividend for India. This large population should be considered as an invaluable human resource and should be provided the necessary skills so as to empower them to lead a purposeful life and contribute to our national economy. By 2020, India will be the world’s third largest economy, with a correspondingly rapid growth in the size of its middle classes.

In India, the main governing body at the tertiary level of education is the University Grants Commission (UGC), which enforces its standards, advises the government, and helps coordinate

Contd. P 2

between the centre and the state. Commission (UGC), which enforces its standards, advises the government, and helps coordinate between the centre and the state. The other important policy initiatives in higher education are programmes for general development of universities and colleges; special grants for the construction of hostels for women; scholarships to students, scheme to provide interest subsidy on educational loans for professional courses, etc.

Higher education in India: the context for change

Despite significant progress over the last ten years, Indian higher education is faced with four broad challenges:

- **The supply-demand gap:** India has a low rate of enrolment in higher education, at only 18%, compared with 26% in China and 36% in Brazil. There is huge demand for higher education in India. By 2020, the Indian government aims to achieve 30% gross enrolment, which will mean providing 40 million university places, an increase of 14 million in six years.
- **The low quality of teaching and learning:** The system is beset by issues of quality in many of its institutions: a chronic shortage of faculty, poor quality teaching, outdated and rigid curricula and pedagogy, lack of accountability and quality assurance and separation of research and teaching.
- **Constraints on research capacity and innovation:** With a very low level of Ph.D enrolment, India does not have enough high quality researchers. There are few opportunities for interdisciplinary and multidisciplinary work. Besides these, lack of early stage research experience, lack of innovation and low levels of industry engagement often create hindrance in research capacity.
- **Uneven growth and access to opportunity:** Socially, India remains highly divided; access to

higher education is uneven with multidimensional inequalities in enrolment across population groups and geographies. Thus, the three central pillars of the government’s plans for education reflect these realities: **expansion, equity and excellence**. Over the next five years, every aspect of higher education is being reorganised and remodelled: funding, leadership and management, quality assurance, accountability, relationships with industry, international collaboration and the way teaching and research are conducted. Emphasis will be placed on strengthening existing institutions.

HEERA: A new horizon

Keeping all this in view, the government of India is proposing to create a new higher education watchdog, which has been tentatively named **Higher Education Empowerment Regulation Agency (HEERA)**. The contours of the body as well as the draft law to back it are currently being worked out by the MHRD in consultation with the NITI Aayog.

The current regulators, namely, UGC and AICTE will cease functioning to make way for HEERA. The main objectives of establishing HEERA are,

- To eliminate the overlaps in the jurisdiction and remove irrelevant regulatory provisions.
- A single regulator will bring in greater synergy among institutions, including technical and non-technical institutions and in framing curricula.
- To empower the new body to take strong penal action, whenever necessary.

Conclusion

It is to be mentioned that the failures of the UGC and called for its scrapping has been highlighted by various education committees namely, the Yash Pal Committee, the National Knowledge Commission as well as the Hari Gautam Committee. The TSR Subramanian Committee, which had been tasked with coming up with a new education policy, too called for the scrapping of the UGC and

Contd. P3

AICTE. UGC has failed on all three primary functions—namely, regulation of universities and colleges; disbursal of grants; and deciding on and maintenance of standards of higher education (non-technical). In this crucial juncture, HEERA will largely be expected to overcome the problems of higher education that is facing in the present days in India.

“Employability of our (Contd. from P1)

Indeed, education is a great tool for social transformation. It plays a significant role in the uplift of a society. It is true that there has been a phenomenal expansion of higher education in India in the recent past. This is evident from the enormous increase in the number of colleges, universities and students as well. In an analytical essay, “Rethinking Quality Parameters”, Prof. S.L. Sarma observes that India has earned the distinction of having the world’s second largest education system after China. But, he continues, one disconcerting consequence of this indiscriminate expansion has been decline in quality of higher education. Nothing illustrates it better than the declining faith of the employers in the value of the university degrees and diplomas, the trend of delinking degrees from job -

- requirements. The irony is that this is happening at a time when we are witnessing the rise of knowledge society, i.e. a society which privileges knowledge (A.R. Kidwani, ed. Higher Education : Issues and challenges. New Delhi: ViVa. 2010. p27).

In order to produce socially relevant and employable graduates, we must impart to our younger generation quality education. To do this our education system has to acquire, what S.L. Sarma calls five quality pre-requisites: quality syllabus, quality faculty, quality teaching and evaluation, quality research and quality character. Some of the indicators of quality syllabus is its regular updating and up gradation, and above all, its relevance for self and social development. But our syllabus for the undergraduates is not designed scientifically. It is either over-staffed or it does not take into account the real life situations or social needs. As a result our finish product, our graduates don’t find employment or they cannot compete in the open market system.

Quality teaching is as much important as quality syllabus. Even the best syllabus fails to yield result if it is not taught properly by competent teachers. We have failed to deliver quality education specially in rural colleges of Assam because most of our colleges don’t have sufficient infrastructure and secondly there is a lack of quality teaching. Quality teaching requires, among other things, competent and more importantly dedicated teachers. And here we have failed miserably. Many of our teachers do not shoulder their responsibility with the kind of sincerity and dedication it requires. Whatever education system we follow, we must ensure quality syllabus, quality faculty and quality teaching. Otherwise education system will lose the relevance as a key agent for social change.

Observation of National Library Day

Date: 13-08-2016

Date: 05-06-2017

Like earlier years, this year also the World Environment Day was observed by the college family by undertaking a day long programmes. In the morning session a “On The Spot Photography” competition was held in the college campus where the participants tried capturing different Flora and Fauna available in the campus and submitted for the competition. In the mid of the day, an awareness programme was organized at the Kacharihat Dhubri where the students of the college tried making the general public -

ACTIVITIES

- aware of the need of biodiversity for the very existence of the mankind. They pointed out the process of propagation of different plants and the role of Bat (the flying fox) in the pollination process of such plants in our environment. Moreover, in this connection an Essay competition was also organized among the students of the college.

In the afternoon, the teachers and students of the college undertook a plantation program at the college campus under the aegis of NSS Unit of the college.
